

CAN Business Class Broadband

Introduction

There is now a quicker way to build a dependable, secure, high-bandwidth virtual private network. CAN Business Class Broadband now offers the traditional benefits of security and predictability generally associated with dedicated communications links.

CAN Business Class Broadband is a high-performance managed Private IPVPN backbone with the power to run applications and services to meet the demands expected from contemporary data networks. The solution is an enabler for customers who may want to prioritise certain data traffic over a high-availability network. No longer is Broadband technology being seen just as a method of gaining high speed internet access. Fundamentally, ADSL is now perceived as a private connection medium for the modern VPN. The following are the immediate benefits.

- *Business only Network*
- *un-congested with low contention ratio's*
- *CAN manage both the BT line and Broadband service*
- *Direct Technical Support*
- *Pre-configured Router service*
- *5 day painless migration process*
- *Option for 24/7 Enhanced Managed Service*

Immediate Benefits

Our Partners

At CAN networks we recognised that the high performance and support demanded by our business customers could not be met by the suppliers of mass market consumer broadband.

To that end we searched for a considerable time before selecting and partnering Griffin Internet Ltd. Griffin owns and manages it's own MPLS IP network and in terms of infrastructure Griffin has four carrier class data centres, hundreds of megabits of transit capacity with active peering with most ISP's at LINX, MaNAP and Xchange point. Griffin recently featured in the Deloitte Technology Fast 500 and also the Sunday Times tech track which recognises the UK's fastest growing technology companies.

The partnership successfully enables CAN to manage the expectations of both your IT support personnel at HQ and the interactive support of end users.

There are seven different levels of service to choose from (ADSL and SDSL see over) with ADSL downstream speeds of up to 8Mbps and a maximum upstream speed of 800Kbps.

Standard and Enhanced Service options are designed for applications such as mission critical applications including Voip and networked services.

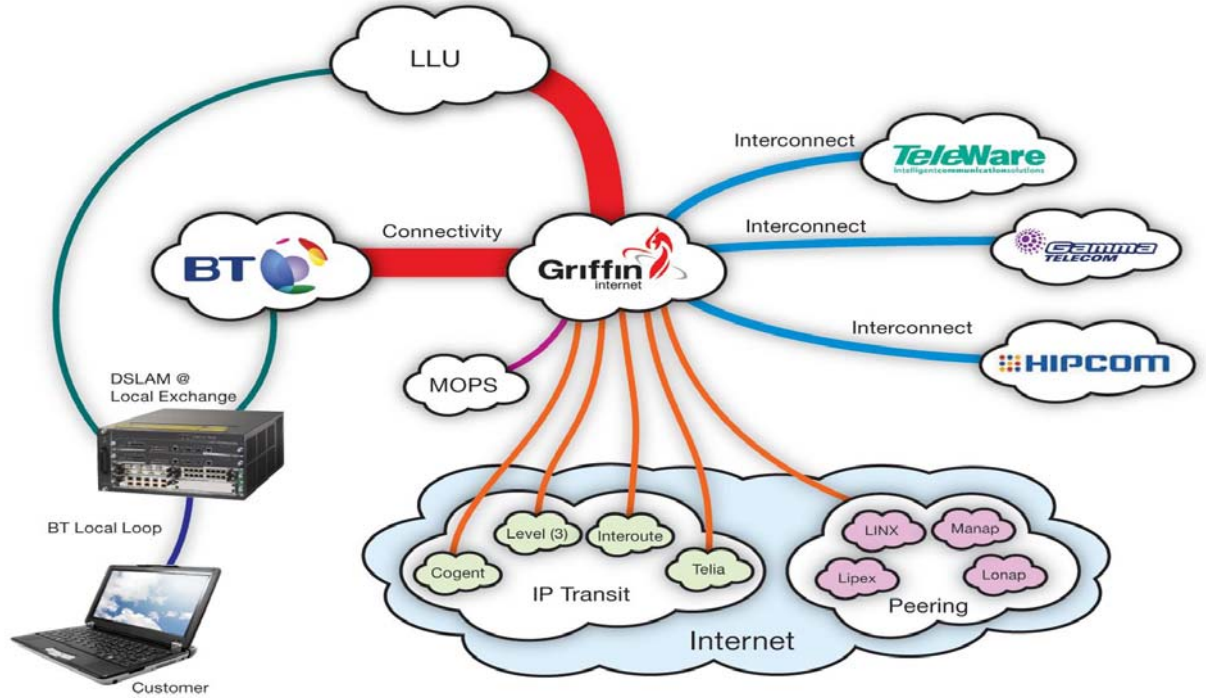

The service is suitable for:

- Your own secure virtual private network with Guaranteed bandwidth
- VOIP platform –protect real-time applications like voice and video
- Branch offices and Home workers
- Videoconferencing and IP Cameras

Guaranteed bandwidth

CAN Business Class Broadband

CAN Network Topology

CAN Service Options

CAN Broadband Service	Download / Upload Speed	Controlled Contention Ratio
HomeWorker 2Mbps (QOS VOIP)	2Mbps / 400 Kbps	Controlled contention ratio 5:1
Office 2Mbps (QOS VOIP)	2Mbps / 800 Kbps	Controlled contention ratio 2.5:1
HomeWorker Max	8Mbps / 448 Kbps	Controlled contention ratio 20:1
Office Max	8Mbps / 832 Kbps	Controlled contention ratio 10:1
Business SDSL, 500Kbps / 1Mbps and 2 Mbps	Synchronous	Controlled contention ratio 5:1
*Pre-configured Router Service also available		

CAN Flexibility to change services

CAN Business Class Broadband doesn't lock you into one service level - for certain service options, you can upgrade your service with just a phone call to give you more bandwidth or a higher level of service. Our sales team will be happy to explain how. In combination, customers now have a fixed cost for connection and rentals empowering you to control your WAN budget spend. The bandwidth you need over your own private broadband connection

CAN Why choose CAN?

CAN are a proven communication services provider experienced in delivering services day in, and day out to many Commercial and Public Sector organisations demanding quality, cost effectiveness & longevity. Our business is based upon the Virtual Network Operator model (VNO).

This is a flexible and asset light sourcing approach. We do not own infrastructure and therefore have the freedom to provide clients with the most cost effective and optimum infrastructure. We purchase from the most suitable carriers, all of which are vetted for capability, support and financial stability.

CAN's processes and procedures are highly respected and with dedicated account support and a No Voice Mail policy. When you select CAN you know you are doing business with a company looking to form a long term partnership with your organisation.
